### UPGRADE TO ACCOYA TIMBER

**Accoya timber** is a remarkable timber product made by altering the cell structure of a particular species of tree from New Zealand. This modified wood is scientifically proven to be resistant to wet rot, dry rot, wood worm and termites. It's also fantastically hard wearing and has virtually no shrinkage or expansion. Rot resistance and stability lessens the need for re-painting and the wood can also be used for submerged timber structures. Although expensive, **Accoya** comes with a 50 year guaranteed resistance to any type of rot which makes it a sound investment for the future.

We are Edinburgh's first **Accoya** certified manufacturer. Ask us for more information or visit [www.accoya.com](http://www.accoya.com) for more details.

### Additional costs for manufacturing from accoya timber

1/1 Style £350 + VAT	2/2 Style £370 + VAT	6/6 Style £400 + VAT
